

AIR-GUARD[®] KIT

GTAG₅

Retro fit existing cutouts and seal non standard panel openings

The **GTAG₅ AIR-GUARD[®] Kit** is designed to fit into both new and existing non standard cut outs using brush seal technology.

As with all Air-Guard products brushes are designed to overlap offering a better air seal.

The brush can be cut as required to fit any custom floor cutout size.

The kit is easy to install with a factory applied adhesive strip to the back of both brush sections.

The engineered side rails integrate with the brush sections.

The side rails are cut as required and screw fixed into position to form a complete edge seal.

There are 2 kit sizes to select from.

GTAG₅-300 – Maximum Dimension 312mm x 225mm

GTAG₅-600 - Maximum Dimension 612mm x 225mm by pass air.

Sealing around under-floor air cooled cable openings offers the following benefits:

- Reduced air-loss and increased static press for under-floor air installations
- Improved cooling efficiencies and extended cooling equipment life
- Reduced cooling plant running costs
- Facilitates Cold/ Hot Aisle best practice
- Seals cable openings to prevent under-floor contamination

AIR|GUARD[®]
the cool choice™

Gromtec Europe has supplied cable grommets and flooring accessories for over 15 years. Our products are installed in projects around the world. All units are typically available from stock for immediate delivery.
